Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solomon (2003/0018251). Applicant's attention is directed to Figures 2A and 3 and the accompanying description in paragraphs [0041] – [0045]. The coils may have a three-coil configuration. Therefore, they may also be configured as a single sensor that is well known in the art. Accordingly, it would have been obvious to the skilled artisan to use a single-coil sensor in the curved section with a multi-coil sensor in the base section dependent upon the degree of mapping desired. The distance of the multi-coil sensor from the distal end of the base section and the particular number of coils in the multi-coil sensor is also within the level of skill of the artisan to select to optimize performance of the mapping.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art discloses electrode catheters with position sensors.
